

The system at a glance

The new three-way ball valve type 543 from GF Piping Systems offers a universal model series with a wide range of options for all versions – from the manual valve to the actuated. The ball valve is the perfect valve for demanding mixing and diverting processes. It follows the design of the ball valve type 546 and is available in the dimensions DN10 to DN50.

Horizontal or vertical: the perfect ball valve
The new 543 three-way ball valve provides quality, flexibility and reliability – in both the horizontal and the vertical versions. The horizontal version comes with an L or T bore and is available in PVC-U, PVC-C, ABS, PP-H and PVDF. So you have the right valve for all your applications.
The vertical version of the 543 ball valve is available in the materials PVC-U and ABS.

For the vertical model, the third outlet consists of a solvent cement spigot in metric standard.
As an additional version besides the L bore, we also offer a diverter ball for the ball valve.

Standards and approvals

- EN ISO 16135: Industrial valves – Thermoplastic ball valves
 - ISO 9393: Thermoplastic valves for industrial applications
 - DIBT (Deutsches Institut für Bautechnik), pending for drinking water, pending
 - NSF 61*: System components for drinking water, pending
- *Only products bearing the NSF mark are certified.

International focus

Our global line of end connector options corresponds to ISO, BS, ASTM and JIS standards.

GF Piping Systems → worldwide at home

Our sales companies and representatives ensure local customer support in over 100 countries.

Always on course

The new
three-way ball valve
type 543

● Convincing design

Perfection in detail

L-bore, 5 functions

Basic position for diverting function

Mixing function with reduced flow

Diverting function

Outlet closed, passage open with reduced flow

Shut-off function

In the ball valve series from GF Piping Systems, attention has been given to every last detail of the individual components. Functionality and design have been perfected so that we can – as always – offer our customers a reliable and intelligent solution.

Easy installation

The ball valve type 543 features integrated threaded inserts. It can be installed directly and rapidly. There is no need to attach complicated fixtures to the valve. The mounting plate from the ball valve type 546 can be used for installation.

Modular solution

With the assembly kit, you can transform the manual three-way ball valve into an actuated valve with a variety of functions. The module can be used as a standard mechanical interface thanks to the all-plastic housing, the sturdy design and secure fastening on the ball valve. It also enables direct connection of electric and pneumatic actuators.

Lockable handle

Comfort and safety are the outstanding features of the multifunctional handle:

- indexing in 45° increments
- exact, safe positioning of the ball
- lockable and therefore protected against unauthorized access
- made of robust PPGF (polypropylene fiberglass-reinforced)

Fast mounting

The preassembled threaded inserts made of stainless steel permit direct installation

Optimal connection

The assembly kit as interface for actuators

Exact positioning

The lockable multifunctional handle

Reliable connection

The plastics-oriented buttress thread withstands maximum forces

Perfect placement

The 90° stop can be placed in four positions as a clip-on ring

Hidden talents

The handle contains the tool for adjusting the union handle

Perfect for Plastics

In developing the buttress thread for the ball valve type 543, a plastics-oriented connection technology was realized and implemented. Compared to the trapezoid thread, the buttress thread offers the following advantages:

- ca. 50% better coverage of the thread flanks
- no radial force components due to contact of the vertical flanks in the loading direction
- max. protection against the union nut loosening and jumping off in case of water hammer

Defined handle operation

The new 90° stop enables using the lever in defined positions of 90°. The specially designed housing of the ball valve enables placing it in diverse positions by means of a clip-on ring. The handle stop is made of robust PPGF and can be used for all materials. It is covered by the handle and therefore not visible from the outside.

Multitalented

The fiberglass-reinforced polypropylene (PPGF) handle is more than just a handle – it also contains the tool for adjusting the union bushes. Another new feature is the marking imprinted on the handle for the various ball positions. This marking cannot be removed.

T-bore, 4 functions

Basic position for mixing function

Diverting function

Outlet closed, passage open

Diverting function
